NOTE: This sequence was generated from a PCR product representing
the region from dexB to aliA and is not necessarily responsible for
the expressed capsule serotype. For a detailed description of how
CDS products were predicted see the associated publication. Bentley,S.D., Aanensen,D., Mavroidi,A., Saunders,D., Rabbinowitsch,B., Collins,M., Donaghue,K., Harris,D., Kalto Murphy,L., Quail,M.A., Samual,G., Skovsted,I.C., Barrell,B. The genes in this cluster are involved in polysaccharide biosynthesis of capsular components and antigens. The proteins have glycosyltransferase activities (CpsIR, CpsIR, CpsIR, CpsIR) and CP polymerase activities (CpsIH). The capsule confers bacterium resistance to complement-mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for recombinant production of the proteins are then useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease, in humans or animals, e.g. against S. suis in pigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CDS

                                              The present sequence represents the capsular gene cluster of Streptococcus suis serotype 2. The genes in this cluster are involved in polysaccharide biosynthesis of capsular components and antigens. The proteins are involved in regulation (CpsA), chain length determination (CpsB, CpsC), export (CpsC), and biosynthesis (CpsE, CpsF, CpsG, CpsH, CpsK). The capsule confers bacterium resistance to complement mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for recombinant production of the proteins. The proteins are then useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease, in humans or animals, e.g. against S. suis in pigs

```
The present sequence is an eps operon from Streptococcus thermophilus. Proteins encoded by the eps operon function in exopolysaccharide (EPS) synthesis. The operon is useful for producing chimeric eps operons, for optimising production of EPS in lactic acid bacteria. EPS impart texture, mouth feel and rheological properties to fermented food products (e.g. yoghurt). They function as thickeners, to provide free-flowing and creamy texture, and may also have biological activities beneficial to health
                                                                                                                                                                                                                                                                  New nucleic acid fragments containing exopolysaccharide operon, useful e.g. for increasing exopolysacchride synthesis in lactic acid bacteria.

The bacterium of the invention may be useful during food preparation, particularly that of beverages and meat, cereal, or dairy products e.g. fermented milk, yoghurt, 'matured' cream, dessert cream, cheese, soft cheese spreads, cottage cheese, milk based drinks, dairy product retentates and baby milk, where the products are derived from an animal and/or plant. The current sequence is that of the spread of the sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New strain of lactic acid bacteria, useful for preparation of pharmaceuticals, especially fermented dairy products, contains involved in polysaccharide biosynthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 16032 BP; 5191 A; 2323 C; 3188 G; 5330

transferase activity in which the above transformant is cultured in a medium to form and accumulate a protein having betal, 3-galactose transferase activity, and in a method for the preparation of a galactose-containing gluside in which a culture liquid of the above transformant or a treated product of the culture liquid is used as an enzyme source, the enzyme source uridine-5'-diphosphate galactose and a receptor gluside are made to be present in an aqueous medium, and a galactose-containing gluside is formed and accumulated in the aqueous medium. The galactose-containing gluside is used as a candidate for infection preventors. This sequence represents DNA encoding betal, 3-galactose transferase proteins of the invention The invention relates to a protein having betal,3-galactose transferase activity, derived from a microbe having an activity of transferring galactose to N-acetylglucosamine by betal,3-bond. The protein can be used in a method for the preparation of a protein having betal,3-galactose

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a receptor in a mammalian cell that inhibits regular activation by receptors specific for lipid-based tumour associated antigen. The receptor has cytostatic and antimicrobial properties and is suitable for use in gene therapy. The receptors, methods and compositions are useful for treating a neoplastic disease tumour (cancer), and infectious diseases. This sequence represents a streptococcal capsular polysaccharide polynucleotide, a cell surface moiety, the DNA of which can be transfected into a cell with superanti DNA to generate antitumour immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New receptor in a mammalian cell that inhibits regular activation by receptors specific for lipid-based tumor associated antigens, useful treating a neoplastic disease or tumor, and infectious diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          receptor; lipid-based tumour associated antigen; cytostat antimicrobial; gene therapy; neoplastic disease; tumour; infectious disease; capsular polysaccharide; ds.

The composition and methods are useful for treating tumors or neoplastic diseases. The present sequence represents a hemolysin nucleit de sequence, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               exogenous nucleic acid encoding a superantigen expressed in the cell, which cell also produces or expresses all alpha-anomers of monoglycosylceramide or diglycosylceramide, where expression of the superantigen and the mono- or diglycosylceramide is capable of elicit an antitumor immune response in a mammal into which the cell is introduced; (2) treating a tumor or neoplastic disease in a subject;
                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New composition for treating a tumor or neoplastic disease in a subject comprises conjugates comprising superantigen polypeptides or nucleic acids with other molecules that produce a tumoricidal response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a composition for treating a disease in a subject. Also described: (1) a mammalian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gene;
